Questions: Delivery Team

#	Question	Answer	Owner	Status
1	Domain: Keep training.grohe.com or integrate as www.grohe.com/de-de/training?	We checked with Al-Wasir and should proceed with an integration with www.grohe.com/de-de/training. But we still need to align with Egi and Nanda on whether the GTC entry can be at that level.	GROHE ACTUM	IN PR···
2	**Designs required** for several components	Also, Sascha is preparing the UX. It would be our preference; do you have any technical input? For the majority of new components, a design is required. This will be a joint effort between Sasha and the ACTUM design team.	GROHE ACTUM	IN PR···
3	**Historical training data migration:** Strategy, tooling, feasibility? GraphQL API confirmed to expose NO user progress data — course completions, quiz attempts/scores, and quiz answers all live in custom MariaDB tables only. Direct DB access (read) is the only extraction path.	GTC_Course Statistics contains the user email and the completed course: This export can be generated from Craft (Excel). Please check if you can use this. All courses are meant to be Collections. Exports here: https://drive.google.com/drive/folders/1STqP61rthQpvK0ITP9RjN9mIirWyxvyG?usp=drive_link Connec	GROHE	IN PR···

		t your Google account @Folwarczny, Jessica lixiluser to ask the current agency if they could download historical data of the whole DB.		
4	**Target group / IDP integration**: In Craft, users can select their Target Group (role) via a dropdown — both during partial registration and later in My Account. This selection drives content visibility (access groups). The open question is: how does this selection flow into the IDP, and does the access group model in NEO (GROHE, Installer, Showroom, etc.) map 1:1 to the Craft target groups?	~~The roles are probably not aligned, as the current roles are only used and saved in Craft. It's possible to create a mapping. If a user is already assigned a (different) role in IdP, it should stay as is.~~ **Current State of CRAFT logic:** Internal/External is coming from IDP (Salesforce). When the user is internal - there's no roles dropdown in the partial registration/my account. When the user is external - he/she selects the role from the dropdown and that role is not stored in Saleforce - it's GTC internal role. We see that there is similar dropdown in the Neo registration for the Professional Users, we should most probably use it instead of the customized Access Groups in CRAFT. **TBD: the registration business logic incl. the "Customer**	GROHE	IN PR···

		type” selection		
5	**Should any training content be publicly accessible** (without login)?	Not at the moment, but as mentioned in Initial Questions it could be in the future.	GROHE	DONE
6	**SEO metadata migration**: alt texts, canonical, hreflang	To be adopted in the current NEO logic. Some meta elements might be needed to prepare during the migration phase.	GROHE	DONE
7	**Broken links / obsolete content**: What should be excluded from migration?	Obsolete content is documented here: https://docs.google.com/spreadsheets/d/1iOAcX6BxOmBvruwBEtrOpiOwFN9-Lspd/edit?usp=sharing&ouid=100672874089472320615&rtpof=true&sd=true Connect your Google account	GROHE	DONE
8	**"Company" tracking dimension**: User Tracking spec lists "company" as a required analytics dimension alongside access group and country. Not currently mapped to any field in the IDP JWT or DB schema — needs clarification on what "company" means (GROHE dealer/partner company?) and whether it's available in the IDP claims.	Company in this case means external companies, for example big GROHE dealers/partners. But it still needs to be clarified with legal department, if we are allowed to track it and share this information internally. In IdP we have a section “Company Detail” with field “Company”. But it is probably not mandatory to fill out and therefore often left empty.	GROHE	IN PR···
9	**Reporting pipeline / Looker Studio**: Architecture proposal — Looker Studio will connect directly to the	There is an API connection between Craft and Looker Studio that connects the Craft	GROHE	IN PR···

	GTC database. Before implementation, need a briefing from Marina/Neele on: (1) how the current Looker reports are structured, (2) what data they contain, (3) how the current Craft CSV/Excel exports are imported into Looker.	tables GTC_Quiz_Statistics, GTC_Course_Statistics and GTC_User_Export with Looker Studio. Nice to have: Information on translated modules. Neele is not involved There’s a connector to the Looker Studio already: 		
10	**Course completion rule**: What exactly marks a course as complete in the new system — all Stories scrolled? All chapters? And does it require quiz passing?	Currently it is defined individually, see: Training Completion Tracking	GROHE	IN PR···

11	**Feedback Form**: Is the footer feedback form currently stored in the same place as end-of-course feedback, or does it go to a different tool (email, etc.)? Any historical data to migrate?	It is forwarded via email (both footer and end-of-course feedback). A general feedback form, that we can link at the bottom of the page should be enough. This form should contain a field "Training name", so that we can identify in regards to which course the feedback is. Requirements have been updated: http://lixilg.atlassian.net/wiki/spaces/GNI/pages/4896457152/Feedback+Support+form	GROHE	IN PR···
12	**Celum - asset migration approach**: Originally, it was assumed that migrated assets would be uploaded directly to Celum. Aaron (GROHE) has raised objections to putting images directly into Celum. The use of Celum for migrated content is now **questionable** — needs a dedicated discussion with Aaron to clarify constraints, alternatives, and the final approach before migration tooling can be designed.	There is no connector between Celum & CMS Craft It needs to be investigated whether the assets used on the GTC are available in Celum and whether they are the right size and resolution for use in Sitecore XM. Also, the availability/quality of metadata associated with the assets needs to be checked. @Andreas Fink & @Wewers, Aaron lixiluser to be involved. (We are talking about 7k assets, but some of them might be duplicates). 2 ways to get the assets: 1) @Folwarczny, Jessica lixiluser to ask the current agency to download the assets from CMS Craft for us. - the	GROHE ACTUM	IN PR···

		agency said it would not be possible 2) ACTUM can download the assets via script (not preferred).		
13	**Celum -> Sitecore XM - assets mapping for the asset migration automation** - the automated migration of the assets to be described to avoid a huge amount of manual upload of the assets in Sitecore XM.	It is possible to automatically migrate assets from Celum to Sitecore XM. Assets mapping needs to be undertaken in this case (which assets will be used on which pages). Asset picker creates 7 aspect ratios, i.e. some of the aspect ratios are redundant for Sitecore XM.	GROHE ACTUM	IN PR···
14	**Inline quiz question tracking**: When a quiz interaction is embedded directly inside a lesson (`Question` in contentBuilder) rather than in a standalone quiz, is the user's answer tracked? Is answering it mandatory for lesson/course completion, or is it purely optional/informational?	Questions are currently mandatory for course completion, but since this is not obvious to users and might make training completion tracking more complicated, they can be “not mandatory” in NEO. Not mandatory anymore, not tracked anymore;	GROHE	DONE
15	**Nugget → Sitecore page mapping**: In Craft, a Nugget is a standalone page (own URL, own entry) that lives inside a Training. Sitecore AI has no direct equivalent content type. Proposed approach: migrate each Nugget as a regular Sitecore page under the Training, with its `contentBuilder` components	Yes, it’s acceptable. There is a different logic in Sitecore (components-based) than in Craft (nuggets-based).	GROHE	DONE

	placed directly on that page. Is this acceptable from a content modelling and editorial perspective?			
16	**Full list of URLs**	Actum to scrape the GTC website and get a full list of URLs @Filip Hunek to connect with @Artsiom Dylevich	GROHE ACTUM	IN PR···
17	Should a separate **search results page for trainings** be designed?	Is Sasha required for designing a separate search results page? It will use the same logic as it does now in the CMS Craft. We’ll need to create a separate search page dedicated to GTC on the NEO website, which will need to be designed separately. It could be developed in “phase 2” after the migration is done. Alternatively, we could use the same design as for the current NEO search results page, which might show the results for trainings. (it would appear as a separate “Trainings” tab next to “Products/Spare Parts/Content” tabs)	GROHE ACTUM	DONE
