Quiz Component

Open questions:

- MVP: what’s the minimal functionalities that we need?

Epic: Interactive Quiz Component

Description: As a Content Editor, I want to create modular quizzes with various question types and custom scoring logic so that I can engage users and test their knowledge on specific topics.

Story 1: Quiz Container, Scoring Logic & Progress Bar (Prio 1)

This story focuses on the "shell" of the quiz, the logic that aggregates the score, and the visual progress indicator.

As a Sitecore Content Editor,

I want to define the passing threshold and global settings for a quiz,

So that I can control the difficulty and provide a summary of performance to the user.

As a Website User,

I want to see a progress bar indicating my current status,

So that I know how many questions I have answered correctly, failed, and how many remain.

Acceptance Criteria

- **Backend (Content Editor):**
  - Ability to insert a "Quiz Container" component.
  - **Field:** `Passing Threshold` (Integer or Percentage). Defines how many correct answers are required to pass.
  - **Field:** `Success Message` (Rich Text). Shown if the user passes.
  - **Field:** `Failure Message` (Rich Text). Shown if the user fails.
- **Frontend (User):**
  - **Progress Indicator:** Visual display showing:

    - Total number of questions.
    - Number of questions answered correctly (Green).
    - Number of questions answered incorrectly (Red).
    - Remaining questions (Neutral).
  - The progress bar updates dynamically after every answer attempt.
  - Upon completion, the user sees the Success or Failure message based on the `Passing Threshold`.

Story 2: Standard Question Types & Feedback Logic (Prio 1)

This story covers the creation of the Prio 1 question types and the immediate feedback mechanism.

As a Sitecore Content Editor,

I want to add Multiple Choice and True/False questions with specific feedback,

So that I can test specific knowledge and explain to users why they were right or wrong.

Acceptance Criteria

- **Question Type: Multiple Choice:**
  - Ability to add 2 to 6 options per question.
  - Ability to mark one option as "Correct."
- **Question Type: True / False:**
  - Simplified interface to select Boolean value as the correct answer.
- **Feedback Logic (Backend):**
  - **Field:** `Individual Success Feedback` (Text). Optional specific text for a correct answer.
  - **Field:** `Individual Error Feedback` (Text). Optional specific text for a wrong answer.
  - **Default Fallback:** If individual feedback fields are empty, the system uses global dictionary items (e.g., "Yes, that's correct!" or "No, sorry, that is wrong.").
- **Frontend (User):**
  - Immediate validation: When a user selects an answer and clicks "Submit/Check," the answer is locked.
  - Visual cue (Green check/Red X) appears immediately.
  - The feedback text (Individual or Default) is displayed below the question immediately.

Story 3: Value Estimation Slider (Prio 2)

This covers the slider interaction where the user must guess a number.

As a Sitecore Content Editor,

I want to add a Value Estimation question,

So that I can ask users to guess numerical values (e.g., years, prices, percentages).

Acceptance Criteria

- **Backend:**
  - **Field:** `Min Value` and `Max Value` (defines the range of the slider).
  - **Field:** `Correct Value` (the target answer).
  - **Field:** `Tolerance` (Optional +/- range to count as "Correct").
- **Frontend:**
  - User sees a slider UI element.
  - Upon submission, the slider reveals the correct position vs. the user's selected position.
  - Scoring logic applies based on the defined tolerance.

Story 4: Drag & Drop Questions (Prio 3)

This covers the complex interactions involving sorting or matching text and images.

As a Sitecore Content Editor,

I want to create Drag & Drop ordering or matching questions using text or images,

So that I can create more interactive and visual assessments.

Acceptance Criteria

- **Variant A: Text Drag & Drop:**
  - Editor creates a list of items and defines the correct sequence (ordering) or pairs (matching).
- **Variant B: Image Drag & Drop:**
  - Editor uploads images to the Media Library and assigns them as the draggable items.
- **Frontend:**
  - Interactive HTML5 Drag & Drop interface.
  - **Validation:** Logic checks if the final order/pairing matches the backend definition.

- Standard feedback mechanism (Correct/Incorrect) applies after the user commits the order.

Technical Constraints & Notes (For Developers)

> **Note to Developers:** This component should utilize Sitecore's **Experience Editor** features to allow content authors to build the quiz visually by adding questions as child items or via a Datasource location.

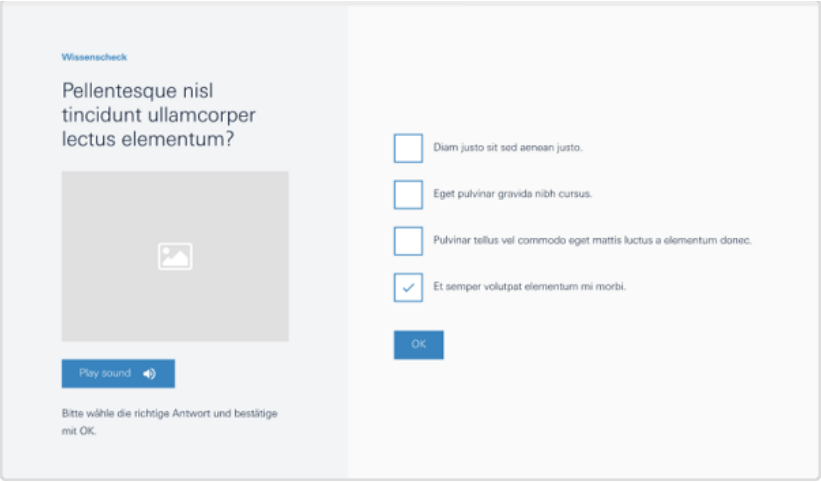
- **Architecture:** Use a Controller Rendering or a JSON Rendering (if Headless/JSS).
- **State Management:** Since immediate feedback is required, use a frontend framework (React/Vue/Angular) to manage the state of the score and progress bar without page reloads.
- **Responsiveness:** The Drag & Drop feature must be touch-friendly for mobile devices.

Summary of Priorities

Feature	Priority	Complexity
Multiple Choice (2-6 options)	**Prio 1**	Low
True / False	**Prio 1**	Low
Immediate Feedback + Default Text	**Prio 1**	Medium
Progress Bar & Scoring	**Prio 1**	Medium
Value Slider	**Prio 2**	Medium
Drag & Drop (Text/Image)	**Prio 3**	High

Example Question:

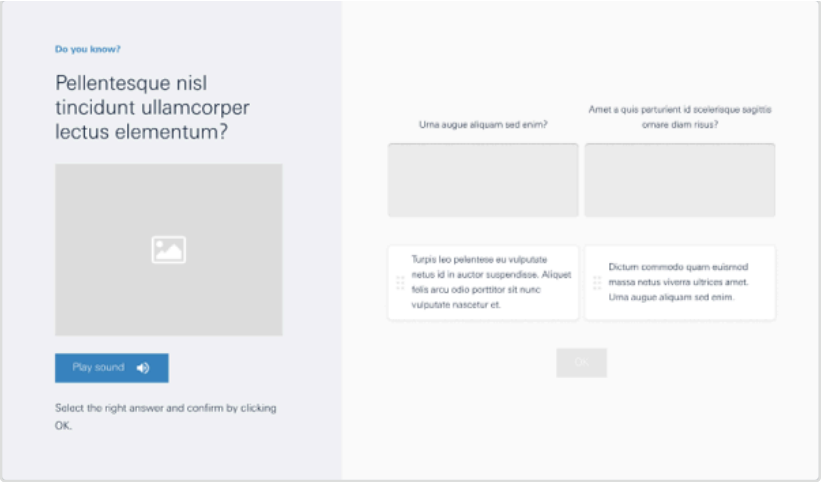
Multiple choice



True or false

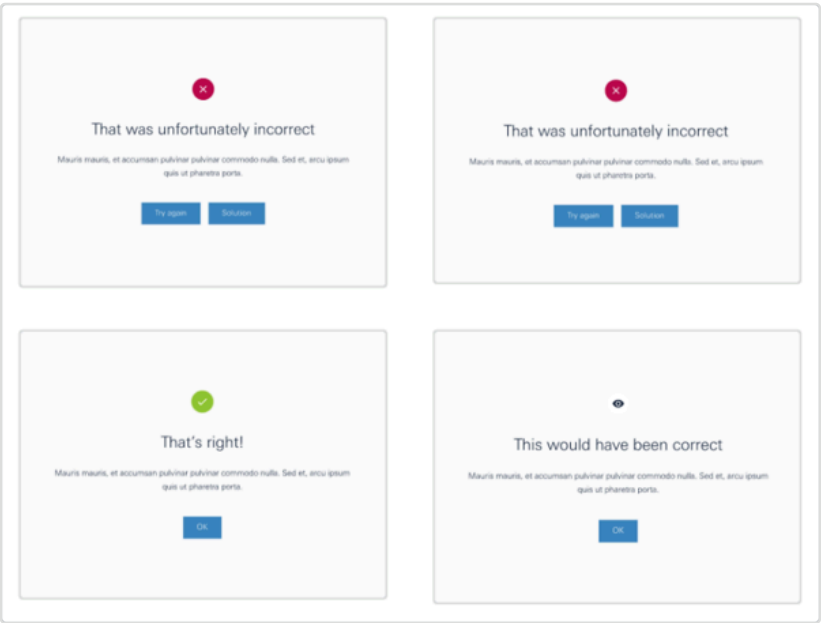
Value slider

Drag & drop



Sortable question?

Example Feedback:



Examples from GTC Craft CMS:

+ Button

Question Instruction

If this field is left blank, the globally defined question instruction will be used

Choice Answer Options

The system automatically recognizes single choice and multiple choice by the number of correct answers

Answer Text	Asset	Correct Answer
3 seconds	+ Add an asset / Upload a file	OFF
4 seconds	+ Add an asset / Upload a file	ON
7 seconds	+ Add an asset / Upload a file	ON
10 seconds	+ Add an asset / Upload a file	ON
12 seconds	+ Add an asset / Upload a file	ON
15 seconds	+ Add an asset / Upload a file	ON

+ Add a row

Positive Feedback

The positive feedback is displayed if the user answered the question correctly.

Feedback Icon	Correct
Feedback Headline	Globally defined feedback headline will be used
Feedback Text *	Yes, the time can be adjusted in five intervals between 4 and 15 seconds.
Image	+ Add image / Upload a file

Negative Feedback

The negative feedback is displayed if the user answered the question incorrectly.

Feedback Icon	Wrong
Feedback Headline	Not quite correct!
Feedback Text *	The time can be adjusted in five intervals between 4 and 15 seconds.
Image	+ Add image / Upload a file

Solution Feedback

The solution feedback is displayed if the user answered the question incorrectly and clicked the solution button within the negative feedback.

Feedback Icon	Solution
Feedback Headline	Globally defined feedback headline will be used
Feedback Text
