Slideshow / Text Slider

Examples from GTC:

1. Text & Image slide: https://training.grohe.com/playlists/purefoam-sales-support
2. Text fixed, image slides: https://training.grohe.com/playlists/purefoam-product-range (Workaround could be https://training.grohe.com/playlists/atrio-design, but effort video creation needs to be considered)
3. Image fixed, text slides: not in use and not needed

Comment in Component Mapping from Nov 3rd:

We have 3 different options of slideres right now. 1. Text and media is on one page and turns to the next one (=slideshow) 2. Text stays and only images change. (For that we create also sometimes a video loop instead of clicking trough - would be a possible alternative: "COLOURS": https://training.grohe.com/enGB/playlists/atrio-design nice to have - then cheaper and easier as no video creation needed 3. Media stays and text changes. not needed

User Story: NEO Text-Image Slider (Flexible Layout)

ID: US-SC-SLDR-02

Priority: High

Theme: Layout & Engagement

1. The Story

As a Content Editor,

I want to create a sliding gallery where both text and images transition together, featuring flexible alignment and sizing options,

So that I can highlight key training themes or products using the specific NEO design aesthetic while ensuring the layout works across all device types.

---

2. Acceptance Criteria (AC)

AC 1: Visual Layout & Variations

- **Ordering:** Editors can toggle between **Image Left / Text Right** and **Image Right / Text Left**.
- **Responsive Behavior:** On mobile, the layout must stack vertically. The editor's choice of "Image Left" or "Image Right" determines if the image appears **above** or **below** the text on mobile.
- **Image Sizing:** Editors can choose between three width ratios for the image container: **Small (33%)**, **Medium (50%)**, and **Large (66%)**. The text container must adjust its width automatically to fill the remaining space.
- **Vertical Alignment:** Editors can align the text block vertically (Top, Center, Bottom) relative to the image height.

AC 2: Image Handling & Formats

- **Format Support:** The component must support Portrait, Landscape, and Square aspect ratios.
- **CMS Guidance:** Inside the Sitecore Content Editor/Experience Editor, the image field should include "Help Text" or a validation warning suggesting the **ideal aspect ratio** based on the selected layout (e.g., "Landscape 16:9 recommended for Large Image setting").

AC 3: Slider Mechanics (Pagination & Playback)

- **NEO Pagination:** Below the main content, there must be a pagination indicator (dots or lines) that follows the **NEO Styleguide** (specific color tokens, active state transitions).
- **Control Modes:** Editors have a checkbox for **Autoplay**.
  - If Autoplay is ON: The slider cycles automatically. An optional **"Loop"** checkbox determines if it returns to slide 1 or stops at the end.
  - If Autoplay is OFF: Movement only occurs via manual user interaction (swiping or clicking pagination).
- **Manual Navigation:** Users can click the pagination dots to jump to a specific slide.

AC 4: Accessibility (A11y)

- **Screen Reader Control:** If Autoplay is enabled, a hidden (or visible, per design) **Play/Pause button** must be available for screen readers to stop the motion.
- **Aria-Labels:** Pagination dots must have descriptive labels (e.g., *"Go to slide 3 of 5"*).
- **Keyboard:** Users must be able to use the `Left` and `Right` arrow keys to navigate slides when the component is focused.

---

3. Technical Data Template (Sitecore)

Section	Field Name	Type	Options / Notes
Settings	Autoplay	Checkbox	Default: False
Settings	Loop	Checkbox	Only active if Autoplay is True
Layout	Image Position	Droplink	Left, Right
Layout	Image Size	Droplink	Small (33%), Medium (50%), Large (66%)
Layout	Vertical Align	Droplink	Top, Middle, Bottom
Content	Slide Items	Treelist	Points to child items containing Image, Headline, Copy, Link

---

4. Visual Layout Logic (Reference for Frontend)

Feature	Desktop	Mobile
Image Left	Image [L] | Text [R]	Image [Top] | Text [Bottom]
Image Right	Text [L] | Image [R]	Text [Top] | Image [Bottom]
Small Image	1/3 Width	100% Width

---

5. NEO Styleguide Note

> **Design Consistency:** Ensure the transition timing (e.g., 300ms ease-in-out) and the pagination dot spacing exactly match the NEO UI Kit library. The "Active" dot should utilize the primary brand color.

Questions:

1. Is 6.1.3.17 | Media Cards Carousel an alternative?
2. Is Content Display Block with a looping video an alternative? 6.1.3.15 | Content Display Block
