Key Information

Category	Detail
Project Name	GROHE Training Companion Operations
System Name	GROHE Training Web-CMS
SoE - Systems-of-Engagement Ticket	https://lixilg.atlassian.net/browse/GSPA-240 Can't find link
Current Owner (Operations)	Eliades, Photis
Current Owner (Development)	External https://this.work/
Target Takeover Date	2026
Takeover Lead (IT)	Montesinos-Gomez, Estanislao
Takeover Lead (Business)	Dutreuil, Antoine
Project Lead (IT)	Person
UX/UI Lead (IT)	Bonneß, Sascha

System Details

Application Information

- **Application Name:** GROHE Training Companion Web-CMS built on CRAFT-CMS
- **Version:** Person (To be confirmed during intake)
- **Technology Stack:**
  - Backend
    - Craft CMS 4.x
    - Additional caching layer (file cache) with custom JSON API
  - Frontend
    - Custom UI framework based on Nuxt.js and SCSS
    - Running NodeJS application consuming JSON data from backend API
    - Two different “views”:
      - Editor Preview:
        - Authentication via Craft login
        - uses Craft cache
      - End User View:
        - Authentication via Grohe IDP
        - uses file cache
  - Search
    - Elasticsearch 7.17 (Docker containerized)
- **Key Features:**
  - From the end user's perspective:
    - Partial registration based on GroheID
    - Access to courses based on user´s role (GROHE internal, installer, showroom, designer & architect, Lixil)
    - Receipt of a certificate for completed courses
    - Search for desired content
    - Selection of preferred language
    - Feedback module
  - From an admin/system perspective:
    - Integration of users outside GroheID
    - Rights/role management for backend users (editors - with possible market restrictions, GROHE admin, super admin)

        - Creation of landing pages, courses, and quizzes in different languages
        - Personalization of content for different user roles (see above)
        - Definition of certificates
        - Export of reports in Excel format and pushing to Grohe´s Looker Studio Account
        - Translation management based on export/import of excel files
- Integrations:
    - Grohe ID
    - Looker Studio
- Documentation:
    - System Architecture Document: File
    - Technical Design Document: File
    - User Manual/Training Materials: File
    - API Documentation: File

Infrastructure Details

- Hosting Environment:
    - Dedicated server on Hetzner Cloud (Nuremberg location)
- Server Specifications:
    - 16 vCPUs (x86)
    - 64 GB RAM
    - 360 GB storage
    - OS: Ubuntu 24.04 (> managed by THIS(
    - Webserver: Caddy
    - Backup: daily server backup by Hetzner Cloud
- Database Details:
    - MariaDB 10.11
    - internal (server) and external backup (protected Cloudflare R2 storage)
- Network Configuration:
    - Frontend access routed via Cloudflare proxy
    - Firewall rules:
        - Server IP open ports: 80, 443
        - All other access (e.g. SSH) restricted via Tailscale
- Monitoring Tools:

  - Prometheus + Grafana
- **Access Credentials:** (To be securely transferred)

Operational Takeover

Support Model

- **Current Support Team:** Person
  - THIS GmbH
- **Support Hours:**
  - 32 hours response time during business hours
- **Incident Management Process:**
  - Personalized support across all available channels
- **Problem Management Process:**
  - Personalized support across all available channels
- **Service Level Agreements (SLAs):** File
  - See offer N° A2025-00011

Maintenance and Monitoring

- **Regular Maintenance Tasks:**
  - Ongoing updating of the software and components used
  - security updates
  - integration of improvements and adjustments
- **Monitoring Alerts:**
  - Availability and accessibility of relevant services
- **Deployment Process:**
  - Requirement definition
  - Local implementation in feature branch
  - Local testing
  - Deployment to staging system (identical to production infrastructure)
  - Peer review & testing (four-eyes principle)
  - Merge into master
  - Tag creation & deployment to staging
  - Final staging test
  - Deployment to production

- Production verification & client handover
- **Current Backlog link:** LIXIL Jira if used or e.g. Monday.com
- **Falls under accessibility?:** To be checked,
- **Main business Initiatives / Priorities:** (EPICS Level) e.g. (New Training programs for Products of Launching Windows…)
- **Current Language scope**:
  - 19 languages, In most cases, the content is not available in all languages.

Development Takeover

Codebase and Version Control

- **Version Control System:**
  - Git (GitHub)
- **Repository Location:** (Link to repository) - please share access, if source code is on LIXIL Bitbucket, share name of repository
- **Branching Strategy:**
  - GitHub Flow
- **Build Process:**
  - Based on GitHub workflow files/jobs
- **Containerization**:
  - Elasticsearch in Docker
- **Figma UX/UI Screens:**
  - Already shared, can be transferred to other Figma-Account

Development Environment

- **Local Setup Instructions:** File
- **Dependencies:**
  - Server: Docker, SSH, Tailscale, Git, Composer, PHP, npm, Node.js, Caddy
  - Backend: Defined via composer.json
  - Frontend: Defined via package.json
- **Testing Procedures:**
  - Integrated into deployment process

Stakeholders

- **Business Stakeholders:** (List of key business users and their roles)
- **IT Stakeholders:** (List of key IT personnel involved)
- **Vendor/Third-Party Contacts:**
  - Employees of THIS GmbH
  -

Action Items

- **Kick-off Meeting:** Schedule a kick-off meeting with all relevant stakeholders. [This.Works Visit - GROHE Training Companion]
- **Documentation Review:** Review all existing system documentation.
- **Knowledge Transfer Sessions:** Conduct knowledge transfer sessions with current owners. Calendar event
- **Access Provisioning:** Ensure all necessary access is provisioned for the new team.
- **Infrastructure Audit:** Perform an audit of the current infrastructure.
  Hetzner is not LIXIL standard, TBD -> GCP preferred.
- **Code Review:** Conduct an initial code review. SonarCloud [Montesinos-Gomez, Estanislao] To-Do
- **Establish Communication Channels:** Define primary communication channels for the takeover.

Next Steps

1. **Initial Contact:** Person to contact current owners for initial discussion by Date.
2. **Kick-off Meeting:** Schedule by Date at Place.
3. **Detailed Information Gathering:** Begin comprehensive data collection on system architecture, codebase, and operational procedures.
