Meeting Notes for THIS Visit - Grohe Training Companion

Date: Oct 23, 2025

Location: THIS office, Düsseldorf

Attendees

Grohe: Estanislao Montesinos-Gomez, Jessica Folwarczny, Marina Vorontcova, Sascha Bonneß, Daniela Hesse

ACTUM: Gianluca Turturro

THIS: Christoph Hubertus, Eugen Jakob, Simon Schmidt (CMS Dev), Tobias (UX)

Meeting Notes for THIS Visit - Grohe Training Companion

Welcome & Integrations

Grohe Training Companion Overview

Authentification

Caching

Personalization

Tracking & Reporting

Certification

Content Types & Components

Languages & Translations

Content & Figures

Infrastructure & Maintenance

Documentations

Workflow & Communication

[Takeover options]

[Note: Craft CMS V4 LTS ends in 04/2026]

[Next Steps]

Welcome & Integrations

- Gain an understanding of the current status
- Plan handover, because THIS is closing operations until the end of December 2025
  - Until end of the year handover operations needed
  - next year only maintenance support from THIS possible
- Purpose of the meeting is to understand the system and to clarify what would be needed for taking over the system

Grohe Training Companion Overview

Authentification

GROHE Training Companion

Authentication

Enduser

- connected to Grohe ID
- partial registration (additional selection of user´s access group: Installer, Architects & Designers, Showroom, Kitchen Studio, DIY / E-com, GROHE, LIXIL)
- access to user´s profile page

Authors

- login over CraftCMS user management
- flexible management of author´s rights regarding the functionality and content visibility / editing

Additional information:

- Craft CMS user management: market users to check translations (15-50, but most inactive, only 10 active authors)

Caching

GROHE Training Companion

Cachewarmer

- an additional caching layer based on file cache for end users
- based on user´s access groups
- Increase in loading speed / load balancing
- content go-live through publishing process in backend
- Live preview in the backend for authors for all content

Additional information:

- 7 caches

Personalization

GROHE Training Companion

Personalization

- based on the user's access group
- personalization for every page down to the individual components
- avoidance of duplicate content => a single page in the system provides personalized information for all user groups

Additional information:

- Engine decides what goes in to the caches (pre-engineered, not on the fly)
- registration as target group, grohe, installer, architect & designer, kitchen studio, lixil, dev_only

Tracking & Reporting

GROHE Training Companion

Tracking & Reporting

- tracking of completed courses and quizzes with number of attempts
- as a download option in Excel format in the backend and as a connection to Google Looker Studio
- additional export of all IDP users

Certification

GROHE Training Companion

Certification

- administrators flexibly determine which content must be completed for the issuance of which certificates
- end users receive certificates for completed training courses in their profile, with the option of downloading these as PDF files

Content Types & Components

GROHE Training Companion

Content Types & Components

- classification of content into collections, stories, nuggets, questions and quizzes
- over 30 components for content creation (from standard elements such as text/media to specific training components such as drag & drop)
- advanced layout options for all components
- definition of the desired brand by the author (Standard, Professional, SPA, and QuickFix)
- Images optimized for individual breakpoints for fast download times
- COPE approach to content creation using nuggets

Additional information:

- Nuggets: definition of content for different types of access groups, especially used, because there is confidential content for Grohe only (e.g. comparison Hansgrohe vs. Grohe) >personalization for internal users and external users
- Nuggets/Personalization is also used to improve the user experience, for example nuggets with extra information that are only relevant for installers/architects etc.
- Nuggets are especially used for the homepage, e.g. an installer sees more technical content than architects & designers etc.
- Quiz: options for quiz with feedback or without feedback
- Different brand styles (standard, professional, SPA, Quickfix),Grohe fonts Universe) are used, different background colours for brands, template flexibility, mobile optimization for authors as mobile is important for installers (tablet) and sales managers (presentation at client’ s site)
  - Is there a visual guideline? No, the author decides.
- There was an option for compact trainings, that were downloadable (incl. videos), but no longer used
- Image optimization
  - Set different breakpoints (and focal point) for devices
  - Optimized download times: on upload very big files are minimized, max. size is defined in the system, compression for videos as well

Languages & Translations

GROHE Training Companion

Languages & Translation

- 20 languages in use with support for RTL
- possibility for language-specific content adaptations (even the images)
- translation using the export/import function based on Excel spreadsheets (copy the content from the master into the target language -> optional language-specific adjustments -> export as a structured Excel file -> translation -> import the Excel file back into the system)

Additional information:

- the 7 caches cache every language
- Actual translation is done in Phrase (import/export excel)

Content & Figures

GROHE Training Companion

Content – Facts & Figures

- ≈60 trainings in the system (1600 content elements in total)
- > 245 GB used hard disk space
- > 8600 media files
- > 3 GB database size (compressed)

Additional information:

- DB only text (3GB compressed - 80% compression), revisions for more than 180days, part of default craft functions, tracking only makes out a small part of this

Infrastructure & Maintenance

- Maintenance:
  - Lightweight technical support: check for updates (normally once a week), content support, caching tasks
- Infrastructure: Linux servers managed by THIS
- GraphQL: not used, but default function by Craft CMS - to get content use json/Rest API
- Deployment: own GIT repository, because code is not shared with Grohe

Documentations

Which documentations exist?

- Technical documentation in German (THIS)
- FE Framework is public in the Github (see next steps)
- Figma Designs (THIS, see next steps)
  - mainly screens of trainings, of system they are maybe outdated
- Translation process (Marina & Jessica)
- Manual (PPT) for markets created by Marina & Jessica, they also provide also Zoom trainings
- There is no documentation of the general process from the training conception to the implementation in Craft CMS, but Marina and Jessica can provide it, if needed

Workflow & Communication

- Communication is mainly via email and discord, no ticket system is used
- Workflow in a nutshell:
  - Jessica & Marina create concepts for trainings depending on need and product launches for different user groups
  - They mainly use existing assets and information from Grohe MarComm and adapt it to the training sections, THIS supports with adjusting assets
  - Pre-Visualization in Figma to get feedback/approval from the markets
  - Markets check translations in Phrase
  - Implementation into Craft CMS, Rollout to countries, QA, Go-Live
- Notes:
  - Currently no new trainings for the beginning of 2026 planned

- Usually 10-12 trainings per year for A launches
- Ca. 1-3 months to create a course (support by 1-2 developers)
- Some creative support (icons etc., images, banners) by THIS
- Creative concept by Grohe

Takeover options

- Buy the code from THIS
- Takeover by BAM agency in Oberhausen: BAM: Wir verwandeln Ideen in Websites, Apps, großartige Designs uvm.
  - Team members helped to build the GTC a few years ago and are familiar with it, but THIS would need to hand over the current status to them
  - Cost: Initial payment of € 100,000 for Content Creation, € 36,000 for license, hosting is included in these costs
  - From January 2026 on
- Actum to integrate GTC into the NEO landscape (see next steps)
- Other options need to be evaluated by Grohe

Note: Craft CMS V4 LTS ends in 04/2026

If we continue to use Craft CMS for GTC, we need to update to V5 in April. LTS for V5 is until 2031.

Next Steps

Task	Description	Who?	When?	Status?
Figma access	Share access with Grohe and Actum	THIS	asap	done
FE Framework	Share link to Github (public) with Grohe and Actum	THIS	asap	

Evaluation of using NEO instead of Craft CMS	Check which components are already available and which are missing > delta	Actum	asap	done
Scorm export	THIS can provide a Scorm export. Grohe needs to inform them in time, if they want it, so that THIS can prepare it	Grohe / THIS	November 7th 2025
